Continuation of 11. does NOT place the application in condition for allowance because: the argument is not persuasive. Applicant argues the reducing agent weakens the gluten network of the dough and has an impact on the organoleptic property of the baked product. This argumnet is not persuasive because it is not supported by factual evidence. Both oxidizing and reducing agents are known to be used in dough and each agent gives different properties to the dough product. For example, the articles teaches that oxidizing agent improves the rheological properties of dough and increases the bread volume, while reducing agent shortens the kneading time and raises the workability of the dough. There is no contraindication to including both oxidizing and reducing agents in the dough product. Without knowing any of the unexpected properties such as short proofing tim and maximum softness set forth by applicant, one would still have been motivated to add the reducing agent for the reason taught in the article. Applicant makes the same argument with respect to the Kilibwa reference. The portion pointed out by applicant concerning the amount of betaine does not give any contraindication to using reducing agent in the dough. There is no connection. The double patenting rejection is maintained for reason of record..
